## WORK EXPERIENCE

### Technical Professional – Software Engineer

Sept 2026 – Present

*KBR Wyle Services, LLC*

- Work as full-stack developer building a new platform as a part of mission technology solutions.

### Software Developer

Aug 2025 – Aug 2026

*Smart Software Solutions Inc.*

- Implemented secure JWT bearer token authentication with refresh token rotation for mobile clients in a cross-platform .NET RESTful API, preserving existing cookie based sessions.
- Developed relational database schemas using Entity Framework code-first migrations, including complex queries with views and stored procedures for optimized data retrieval and reporting.
- Transformed Figma designs into interactive and responsive front-end views, using modern CSS/SCSS and Bootstrap to achieve fluid UI across multiple screen sizes on both web and mobile.
- Modernized database transaction handling by introducing rollback/commit patterns and structured exception handling, to ensure ACID compliance and data integrity.
- Integrated FingerprintAIO biometric authentication on iOS and Android, enabling Face ID and fingerprint login with secure native credential handling.
- Integrated Tesseract Optical Character Recognition to extract and auto-fill fields with Machine Readable Zone data from passports, achieving over 90% parsing accuracy.
- Automated build deployments to the development server via bash scripts, reducing build times by 30%.

### Computer Science Teaching Assistant

Jan 2023 – May 2024

*University of Rochester*

- Conducted weekly technical labs for 150+ students in core data structures and algorithms topics.
- Guided students through problem-solving, debugging, and code architecture during study sessions.

### Computer Science Workshop Leader

Jan 2022 – Dec 2022

*University of Rochester*

- Led technical sessions for groups of 10+ students, engaged in collaborative discussion on algorithms.
- Participated in weekly leadership class to build actionable strategies for the upcoming workshops.

## PROJECTS

### Entity Component System Web Application (Rogue Survivor)

[GitHub](#)

- Engineered a high performance data-oriented web app in TypeScript by leveraging an Entity Component System, optimizing for cache locality via flat TypedArrays to handle 2,000+ active entities.
- Automated the release life-cycle by implementing a CI/CD pipeline using GitHub Actions to push production builds and deployment to GitHub pages.
- Built a spatial hashing collision system to reduce collision queries from  $O(N^2)$  to average linear time.

## SKILLS

- **Languages:** C#, TypeScript, JavaScript, Golang, SQL
- **Back-end:** .NET 8/.NET (Core), Entity Framework, LINQ, ASP.NET Web API
- **Front-end:** Angular 17, React/Router/Redux, HTML, CSS/SCSS, Tailwind CSS, Bootstrap
- **Database:** Postgres, Microsoft SQL Server
- **Tools:** Git/GitHub/GitHub Actions, npm, Vite, Docker, Postman, VS Code, Visual Studio

## EDUCATION

### University of Rochester

Graduated May 2025

*Bachelor of Science, Computer Science*

- Cumulative GPA: 3.81 (out of 4.0) | Water Polo Club Business Manager | 3x school hackathon winner
